THE FINANCIAL CRISIS

MAJOR FACTORS OF THE FINANCIAL CRISIS

- 1. Off Shore Money Flows to USA looking for yield and/or safety (money glut)
- 2. Clinton initiative everyone should have home ownership
- 3. Greenspan cheap money- to keep economy moving
- 4. Investment Banks (Wall Street) chasing a flat yield curve
- 5. Product driven Investment Banks young geeks' derivative formulas to increase margins
- 6. Media hypes over built and down markets: Las Vegas, Phoenix, Florida, and Southern California
- 7. Rating agencies lack of diligence and dependence on out dated models
- 8. GSEs and I-Banks create ready secondary markets to purchase and securitize "mortgage paper"
- 9. Shoddy regulation of Investment Banks/NO regulation for Mortgage Companies
- **10.** Big Profits created by leverage and inflation
- 11. Mark-to-no market Enron response Destroys Bank Capital
- **12.** Short selling (no uptick rule)
- 13. Government lets Lehman Brothers Fail Sends systemic shock waves throughout world
- 14. Oil Prices drop
- **15.** AIG Liquidity (Credit Default Swaps)

The Premier National Graduation School of Banking™

FINANCIAL CRISIS: MARKETS

2001-2007 Institutional investors seek higher yields (in FLAT yield curve arena)

Demand Collateral Debt Obligations (CDO's) AAA-AA ratings given to an MBS Bond Market Investment Bankers leverage at 30 to 1 and produce more products Hedge funds emerge / private equity funds emerge - Lots of money seeking higher yields. June 2007, more defaults as housing prices continue to drop

- 1. Unregulated mortgage companies make poor loans based on housing prices rising, low equity, no income checks, low doc/no doc.
- Over built housing markets in Miami, Las Vegas, etc. Home prices drop (Big Supply) and become worth less than their mortgages. Defaults begin. Media hypes these markets as subprime problems.
- 3. Q-1 2007: Dow starts down and CDO's lose value, rating agencies wake up, everyone begins to have liquidity problems as foreign money begins to leave and consumers slow spending and begin to withdraw funds from banks. Money market funds lose \$ 200 billion.
- 4. June/July/Aug/Sept: Rating agencies go on rampage and rate collateral and mortgages down.

Stressed companies can't sell stock or bonds... Bear Sterns and GSE' show stress and bonds are re-rated. Government begins bail out- Bear Sterns, AIG, and they ask Investment Banks to deleverage. Lehman Brothers goes bankrupt.

- 5. Q-3: JP-Morgan buys WAMU- FDIC brokered. It is realized that foreign countries have lots of US MBS bonds and begin large sell-offs. Liquidity gets worse- nobody can borrow-all asset classes shut down.
- 6. Government begins \$700 billion bailout considers buying bad mortgage in Resolution Trust Company (RTC) Bad Bank Format - but forced \$350 billion capital injection on banks.
- Q-4: Commercial Bank (herd) goes into defense mode due to liquidity problems and credit slows. The press begins intense reporting on economy. The economy constricts - unemployment rises - fear quotient rises.

Commercial Banks Leveraged	12/1
Investment Banks Leveraged	30/1

INVESTMENT BANK TIMELINE: 2008-09

1	Jan-08	Merrill Lynch posts a loss of \$7.8 billion for 2007 \$51 billion of subprime losses. Bank of America took over in a \$50 billion stock transaction.
2	Feb/Mar 08	Bear Sterns is brought By JP Morgan Chase for \$240 million Bear Sterns is Big losses on a sub-prime debt and a crisis of confidence in leadership made it Wall Street's first major victim. With help from the Fed, JPMorgan bought it, first for \$2, then \$10 a share.
3	April-08	Citigroup reveals another \$12 billion in subprime losses, bringing its total to \$40 billion Citi began the year having to raise billions from Abu Dhabi and Singapore, then lost Wachovia to Wells Fargo and had to get a huge government bailout: \$45 billion, plus a deal to back-stop \$300 billion in toxic assets.
4	July/Sept-08	Lehman Brothers filed Chapter 11 bankruptcy Massive subprime and real estate losses compounded by arrogant happy-talk management. In Sept, amid the bailout frenzy, the government let Lehman go, leading to the largest bankruptcy in U.S. history.
5	Sept/Oct-08	AIG taken over by U.S. government with \$85 billion loan Insuring debt was like insuring cars - \$440 billion in credit default. In September, it was nationalized with an \$85 billion loan. By October, this bottomless pit needed another \$37 billion, then another \$40 billion.
6	Sept/Oct-08	Goldman Sachs restructures as a bank holding company Warren Buffett pumped in \$5 billion after it submitted to Fed regulation a commercial bank. In December, it reported its first loss ever.
7	Sept/Nov-08	JPMorgan Chase acquires WaMu for \$2 billion Swallowed two whole banks in one year. In March it got Bear Stearns and its \$1 billion building on the cheap. In September, it snagged savings-and-loan giant WaMu for \$2 billion just before WaMu failed.
8	Sept/Nov-08	Bank of New York Million is named custodian of bailout funds World's largest asset management firm was hired by Treasury to oversee the purchase of all those toxic assets the \$700 billion bailout was going to buy. Turns out it did not buy them after all. So what's the big contract for?
9	December-09	Morgan Stanley posts \$2 billion 4th-quarter loss Chinese cash infusion in late '07 couldn't cushion big trading and subprime losses. Like Goldman, it became a commercial bank, then sold 20 percent of itself to a Japanese bank. Ended '08 with a \$2 billion loss.

BANK RATIOS

1)	ROE =	NI/Capital: to increase ROE, must either lower capital or increase net profits.
2)	ROA =	NI/Assets: to increase ROA, must either lower assets or increase net profits.
3)	Equity Multiplier =	Assets/Capital: a higher equity multiplier indicates higher financial leverage,
		which means the company is relying more on debt to finance its assets.
4)	Capital Ratio =	Capital/Assets: to increase capital ratio, must either lower assets or
		increase equity. Can be used as the inverse to the equity multiplier (i.e.
		ROA X EM = ROE or ROA/CR = ROE).
5)	Loan/Deposit Ratio=	Loans/Deposits: higher the ratio, the more the bank is relying on borrowed
		funds, which are generally more costly than most types of deposits.
6)	Efficiency Ratio =	Non-Interest Expense/(Total Revenue - Interest Expense): ideal for this
		number to be as small as possible smaller the number, the less being
		spent on expenses such as marketing, salaries, branch expenses, etc.
7)	Net Interest Margin =	Interest Income - Interest Expense/Earning Assets: measures the difference
		between interest income generated and interest paid to depositors
		relative to the earning assets.

ROE CHEAT SHEET

RISK CATEGORIES

Credit Risk from a debtor's failure to meet the terms of any contract with the bank or otherwise fail to perform as agreed.	Interest Rate Risk from movements in interest rates.	Liquidity Risk from a bank's inability to meet it's obligations when they come due, without incurring unacceptable losses.
Price Risk from changes in the value of portfolios of financial instruments.	Foreign Exchange Risk from movement of foreign exchange rates.	Transaction Risk from problems with service or product delivery.
Compliance Risk from violations or non- conformance with laws, rules, regulations, prescribed practices or ethical standards.	Strategic Risk from adverse business decisions or improper implementation of those decisions.	Reputation Risk from negative public opinion.

The Premier National Graduation School of Banking™

MEGA TRENDS IN BANKING

- 1. Return to focus on the basics deposits and lending
- 2. Reregulation and increased compliance costs
- 3. Consolidation
- 4. Focus on C & I lending return to "5 C's"
- 5. Mandated higher capital and liquidity ratios
- 6. Less concentrations
- 7. Reduced margins efficiency ratio
- 8. Upgraded residential lending standards
- 9. Technology upgrades and increased standardization
- 10.Increased senior management communications/oversight regarding systems, loan review in-bank systemic risk management
- 11.Demographic Economic Factors: Baby Boomers need for wealth management and transition expertise

DEALING WITH PERSONALITIES

Dealing with **ANALYTICS:**

- Be systematic, exact, organized and prepared and have data for them.
- List advantages, disadvantages of the proposal.
- Give analytic time to verify words and actions.
- Provide solid, tangible, factual evidence.
- Follow up in writing to verify the discussion.
- Do not rush the decision-making process.

ANALYTICS are:

Conservative Exacting Objective Black and white Logical Time tested

Dealing with **AMIABLES:**

- Build a strong, sincere relationship.
- Be interested in customer as a person and listen.
- Take away from office for coffee, lunch, etc.
- Offer personal assurance of support.
- Do not overstate guarantees.
- If you disagree, do not debate facts and logic; discuss personal feelings and opinions.

AMIABLES are:

Loyal Team players Prudent Dependable Comfortable Supportive

Dealing with **DRIVERS:**

- Dominance respects dominance stand your ground. Be self-confident.
- Be precise, efficient, time-disciplined and well organized.
- Give recognition to their ideas, not to them personally.
- Keep relationship business-like. Do not attempt to develop a personal relationship unless customer wants it.
- If you disagree, argue facts toe-to-toe; however, do not over-dominate.

DRIVERS are:

Results oriented Performance oriented Professional Relentless Incisive Impacters

Dealing with **EXPRESSIVES:**

- Give them center stage.
- Summarize in writing to verify agreed upon discussion.
- Use referrals from important people and companies. Drop names.
- Be entertaining and fast-moving.
- Talk about opinions, ideas and dreams.

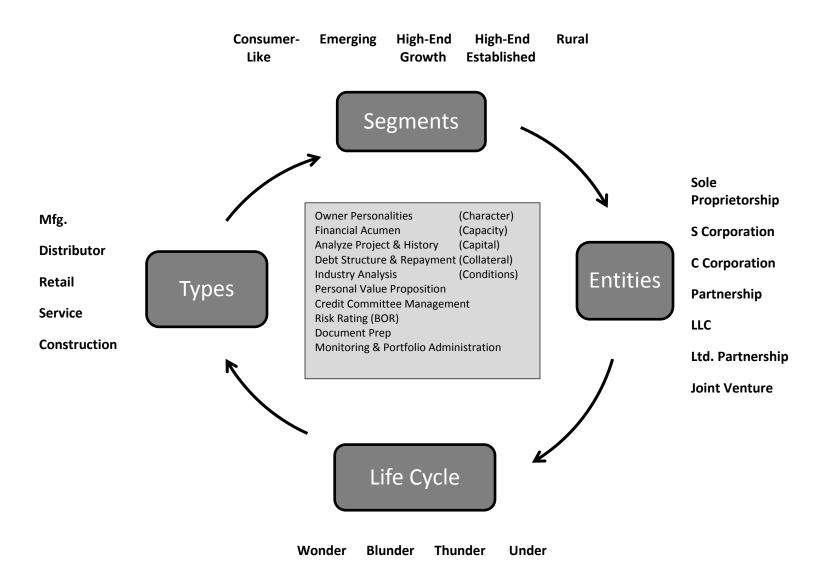

EXPRESSIVES are:

Creative Innovative Revolutionary Dynamic Dramatic Achievers
